

Vizbl Product Schedules

Version 2026-10-02.2

A Rug Visualization

This Schedule applies only where Rug Visualization is selected in the Order Form. It supplements the Visualization Services Terms of the same version and does not set prices, a catalog limit, an unlimited allowance or a minimum term.

Scope. Vizbl displays selected rug products in supported room visualization experiences using supplied images, dimensions and supported size variants. Only the channels, catalog preparation, update service, analytics and integration work identified in the commercial documents are included. The Order Form identifies the catalog counting unit; if “design” is selected, different sizes of the same pattern and color count as one design, and a different pattern or colorway counts separately.

Inputs. Customer supplies complete high-resolution top-down images, accurate dimensions, product names, identifiers and URLs, with rights to use them. Images should include edges and fringe without cropping or material obstruction. Customer approves product data and visual presentation. Vizbl identifies unsuitable source images and corrects its own processing errors under the Terms.

Accuracy. Lighting, cameras, screens, perspective and source-image quality affect appearance. Visualized size is an estimate based on supplied dimensions and supported calibration. Customers and shoppers must verify actual dimensions, color and room measurements independently. Vizbl does not provide installation, interior-design suitability or material-performance advice.

Usage. Catalog allowances, view/session counting, update quantities and any usage rate are stated in the commercial documents. A view is not automatically a billable event merely because a widget loads. If views are purchased, define a billable view and the measurement period before signature. Vizbl-generated retries and duplicate accounting records cannot create duplicate charges. No paid overage arises without the signed authorization required by the Terms.

Images and publishing. Customer chooses which product assets are publicly displayed. Room photographs remain private service inputs subject to the DPA; they are not added to public catalogs or promotional materials by default. Product exports and static-asset licenses follow the Terms.
